Dear Hiring Manager,

I am writing to apply for the Software Engineer position with Bloomberg L.P. As an aspiring engineer with experiences in Java and web development, I believe I can add value to your team and help your organization accomplish its goals. I've always been interested in the development of the Bloomberg terminal and would love to contribute to the current maintenance and innovation of the product.

As an undergraduate at Georgia Institute of Technology, I gained software development skills and knowledge in artificial intelligence through the courseworks that concentrate in Information internetworks and intelligence. I've also developed a website called "College Cribs" that connects renters and landlords for short-term student housing. Outside of classes, I acquired the "AWS Cloud Practitioner" certificate to showcase my knowledge in AWS services.

During my time working with Amazon Business, I integrated a third-party certified seller certification into our system. This automated integration not only saves time for sellers as they don't have to manually upload the certification onto Amazon, but also saves a lot of work for the certification associates as they do not have to audit the manually uploaded certifications. This project is now launched and is impacting over 8k active users, generating over \$1.8M in revenue for Amazon in the next year. I also received positive feedback for my ability to communicate since I worked very closely with the Product Manager, Quality Assurance Engineer, and engineers from the third-party company.

I am grateful that you've taken the time to consider me for the position. Please contact me if you have questions or want to discuss my candidacy further.

Sincerely,

Muchen Zhang
